

# Upgrading/Installing UPS WorldShip v12.0

These interface instructions support UPS WorldShip Software V 12.0.

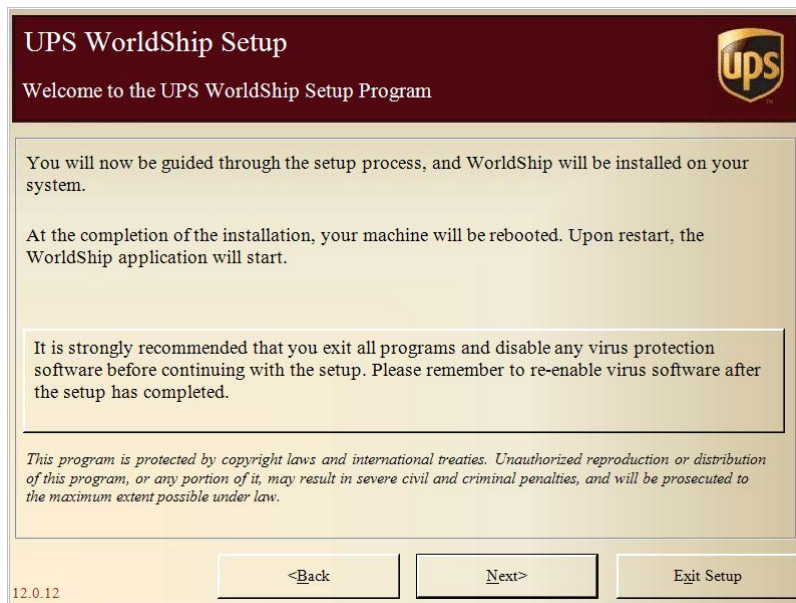

Your E2 **Packing Lists** MUST carry the **Shipping Code** “UPS” in order for the export to “see” them and list them on the **Export** tab of the interface. If you have special instructions for your shipping department (e.g., UPS Blue), enter this information in the **Ship Via** field on the **Header** tab of the **Order**. This will populate the **Ship Via** field on your **Packing List**. If you have multiple boxes in a shipment, use the **Pack Separately** option on the **Detail** tab of the E2 **Packing List** and determine the number of parts to be packed in each container. These “multiple” packages MUST be sent over to UPS divided this way so they can be properly numbered via the Reference Numbering system in WorldShip and assigned individual Tracking Numbers (refer to the Export Options in Step 5 on page 3). The **Description of Contents** field on the **Bill of Lading** tab cannot be more than 50 characters.

## *Installing to Upgrade to V12.0 from a previous UPS Worldship Version*

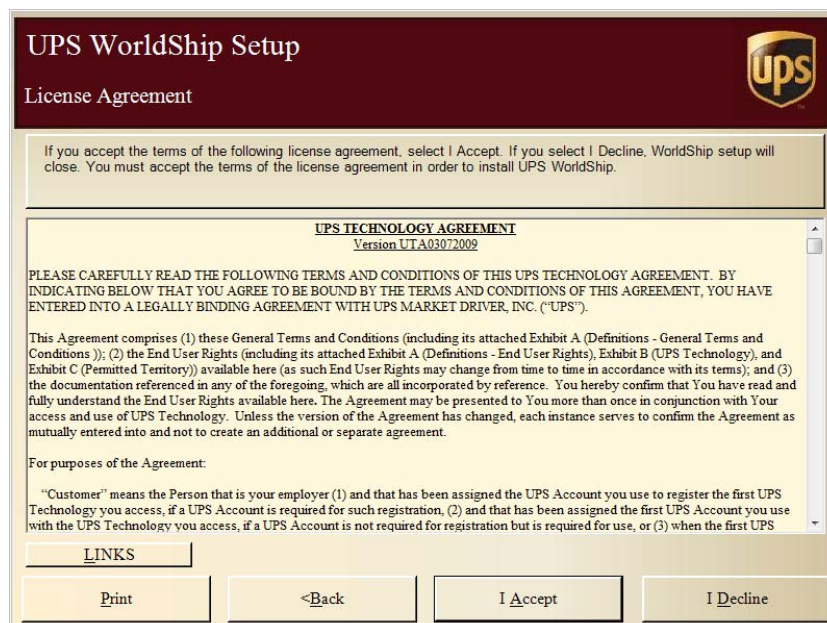

You do not have to uninstall your previous version of UPS WorldShip to upgrade. Simply run the CD and follow the onscreen instructions! This install is considerably longer than previous versions so please be patient. You will first be asked to select your desired application language.

Then the setup wizard will begin, warning you to exit all other programs. This wizard automatically completes and restarts your computer so please do save and close all other programs so you do not lose any work in other applications. Click **Next** to continue.

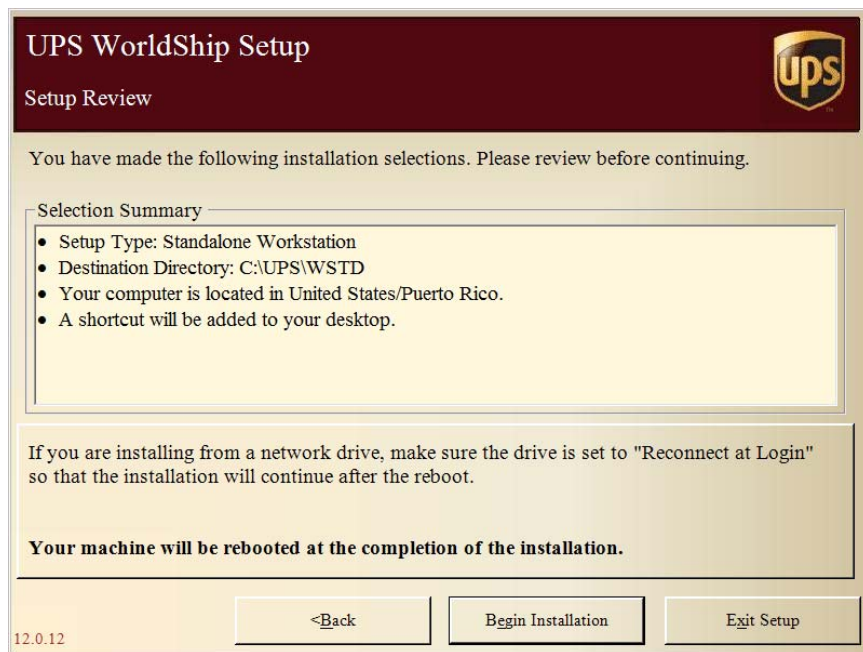

If you have an incompatible version of SQL Server already loaded on your workstation, the setup wizard will detect it and request that you contact UPS Technical Support. You may have to uninstall an older version of SQL Server or at the very least make sure if you are running SQL Server 2000 that you update to v8.0 - Service Pack 4.

If you did not have a SQL Server incompatibility, you would see the License Agreement. Click **I Accept** to continue.

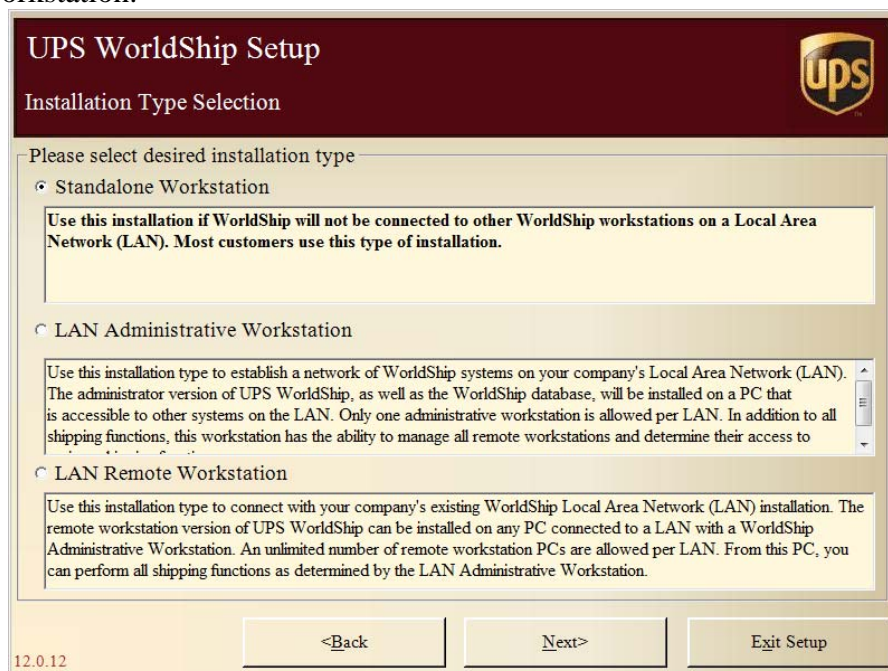

Provided your previous version of UPS Worldship was installed correctly with the correct local directories, you will then see the following screen:

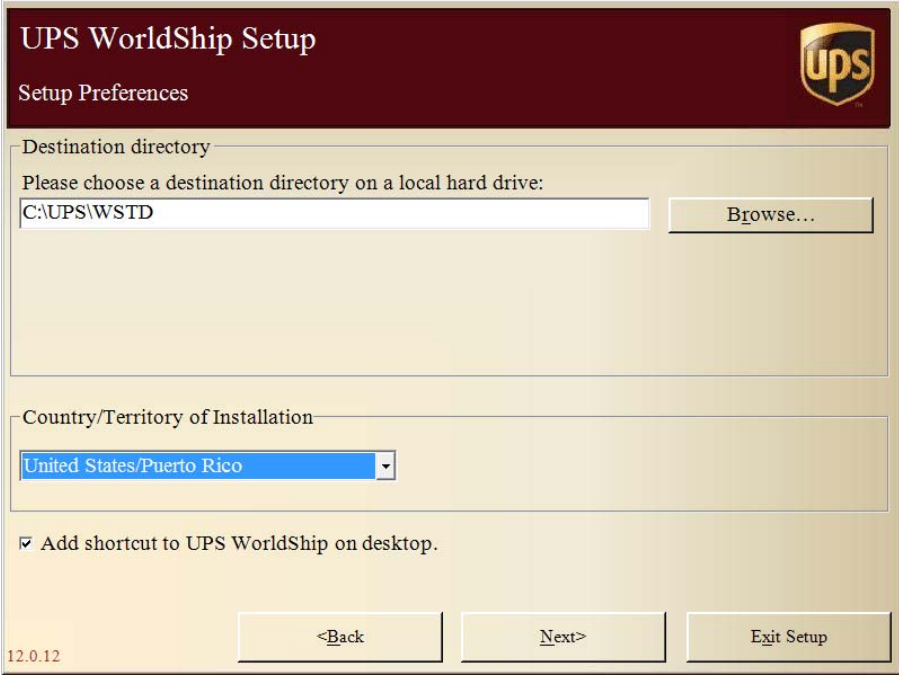

## Installing V12.0 of UPS Worldship – Fresh Install

The **Destination Directory** defaults to load on your local drive. **We strongly recommend that you work with UPS WorldShip on a local drive rather than across a network or shared drive.** Shoptech Support cannot guarantee correct results or accurately troubleshoot E2/UPS Worldship interface problems if the destination directory is anything other than the installed workstation's local C:\ drive.

Select Standalone Workstation.

Ensure that the destination directory is set as illustrated in the screenshot and select Country/Territory of Installation. Click Next.

The screenshot shows the 'UPS WorldShip Setup' window with the 'Setup Preferences' tab selected. The 'Destination directory' section has a text box containing 'C:\UPS\WSTD' and a 'Browse...' button. The 'Country/Territory of Installation' section has a dropdown menu showing 'United States/Puerto Rico'. A checkbox labeled 'Add shortcut to UPS WorldShip on desktop.' is checked. At the bottom, there are three buttons: '<Back', 'Next>', and 'Exit Setup'. The version number '12.0.12' is in the bottom left corner.

UPS WorldShip Setup

Setup Preferences

Destination directory

Please choose a destination directory on a local hard drive:

C:\UPS\WSTD Browse...

Country/Territory of Installation

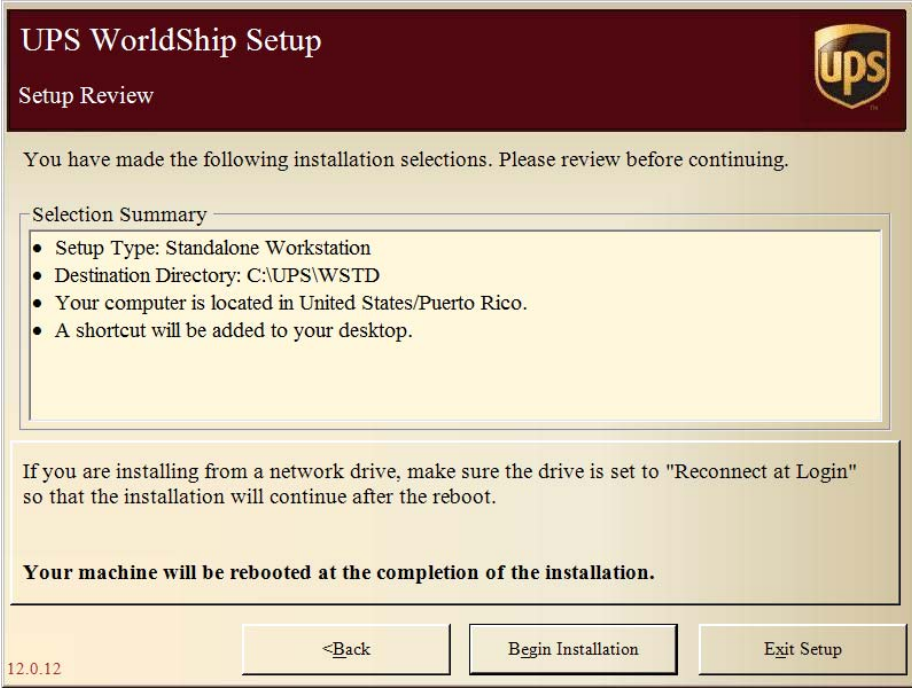

United States/Puerto Rico

☒ Add shortcut to UPS WorldShip on desktop.

<Back Next> Exit Setup

12.0.12

Confirm within your selection summary that your set up type is Standalone Workstation and Destination Directory is C:\UPS\WSTD. Then, click Begin Installation.

The screenshot shows the 'UPS WorldShip Setup' window with the 'Setup Review' tab selected. It displays a 'Selection Summary' with four bullet points: 'Setup Type: Standalone Workstation', 'Destination Directory: C:\UPS\WSTD', 'Your computer is located in United States/Puerto Rico.', and 'A shortcut will be added to your desktop.' Below this, a note states: 'If you are installing from a network drive, make sure the drive is set to "Reconnect at Login" so that the installation will continue after the reboot.' A bold statement follows: 'Your machine will be rebooted at the completion of the installation.' At the bottom, there are three buttons: '<Back', 'Begin Installation', and 'Exit Setup'. The version number '12.0.12' is in the bottom left corner.

UPS WorldShip Setup

Setup Review

You have made the following installation selections. Please review before continuing.

Selection Summary

- Setup Type: Standalone Workstation
- Destination Directory: C:\UPS\WSTD
- Your computer is located in United States/Puerto Rico.
- A shortcut will be added to your desktop.

If you are installing from a network drive, make sure the drive is set to "Reconnect at Login" so that the installation will continue after the reboot.

**Your machine will be rebooted at the completion of the installation.**

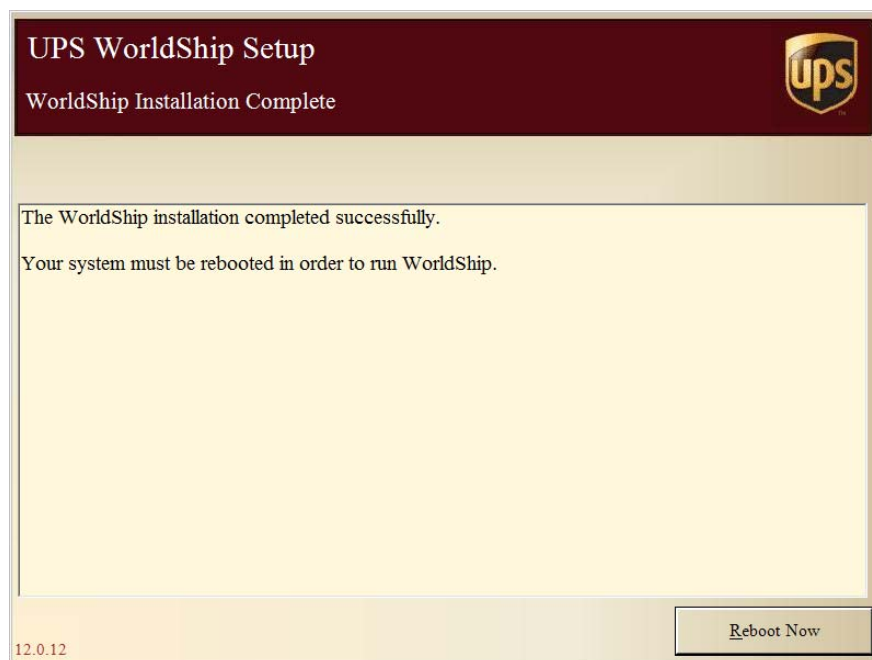

<Back Begin Installation Exit Setup

12.0.12

The **Setup Wizard** will now begin installing all the necessary components: MSJET, System Files, MSDE (the free version of SQL Server), Address Reconciler, NRF, CCC, Policy Manager, RRU, ICC, FOSS, Report Server, WorldShip, Support Utility, Help, NA1 Messenger, and Configuration Component.

Once the last Component is installed (Configuration Component), your machine will automatically complete the Setup Wizard and begin the Restart process.

## Account Validation

Once the Restart process completes, the WorldShip wizard will complete its installation. It will initially perform a **UPS Database Check**. This is a process that will be done once each time you open WorldShip. Depending on the size of your database, this could take several minutes.

Once the database check is completed the **Database Backup** will be performed and for this first time into version 12.0 a **Database Conversion** from V28 to V101 will take place. This will bring all of your data from the existing version up to version 12.0.

## Getting Custom E2SS Maps in Place

WorldShip v12.0 will then open. Click the **Import/Export Data** dropdown menu.

The screenshot displays the UPS WorldShip application window. The title bar reads "UPS WorldShip". The menu bar includes File, Edit, Activities, Tools, UPS Web Access, Import/Export Data, Window, and Help. Below the menu is a toolbar with icons for Packages, Freight, History, Shipprint, UPS.com, Truck, Address, Send To UPS, Repeat, Undo, Void, End of Day, and Help.

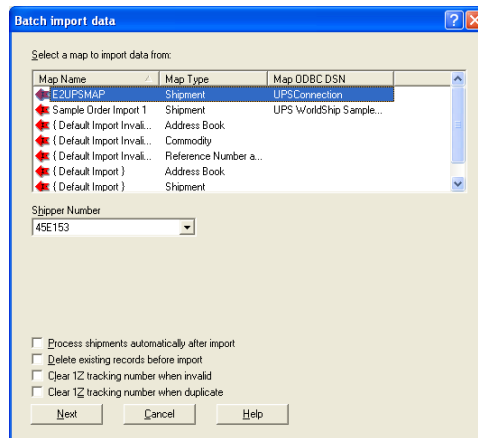

The main workspace is divided into two panes. The left pane has tabs for "Ship To", "Ship From", and "Distribution". Under "Ship To", there are fields for Customer ID (with a dropdown for "Update Address Book" and "Residential"), Company or Name (with a search icon), Attention, Address 1, Address 2, Address 3, Country/Territory (dropdown), Postal Code, City or Town, State/Province/Country (dropdown), Telephone, E-mail Address, UPS Account Number, and Tag ID Number. There are also links for "Profile:" and "Shipper:". At the bottom, there's a field for "Pkg:" with a dropdown showing "45E153" and another dropdown for "Profile:".

The right pane has tabs for "Service", "Options", "Detail", and "Reference". Under "Service", there are checkboxes for "Freight" and "UPS Service:", a dropdown for "Next Day Air", and a checkbox for "Saturday Delivery". Under "Options", there are fields for Length, Width, Height (in inches), Declared Value, Reference Number 1, and Reference Number 2. Under "Detail", there's a section for "Bill Transportation To:" with a dropdown for "Shipper" and a checkbox for "With Return Services". Below that is a section for "Weight (lb)" with a "Package:" dropdown, a weight field showing "0.0", and a checkbox for "Electronic Scale Activated". Finally, under "Reference", there's a section for "Shipment Cost (USD)" showing "0.00".

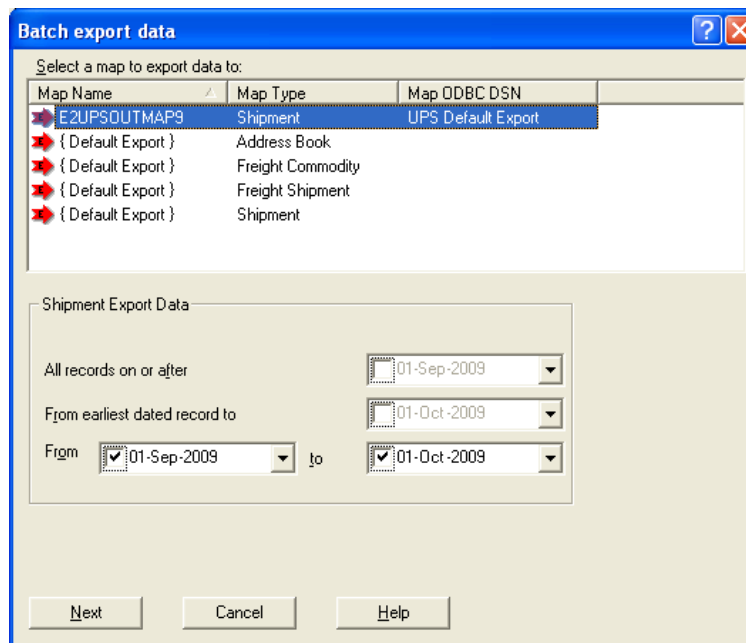

At the bottom of the window, there's a status bar that says "Your invoice may vary from the displayed rates." On the far right, it shows "Ver: 11.0.12 XOFY".

Select the **Batch Import** option and ensure that the **E2UPSMAP** file is still displaying here. If it is not, you can find it in your E2 Source directory and copy it from there into the appropriate UPS directory:

C:\UPS\WSTD\ImpExp\Shipment

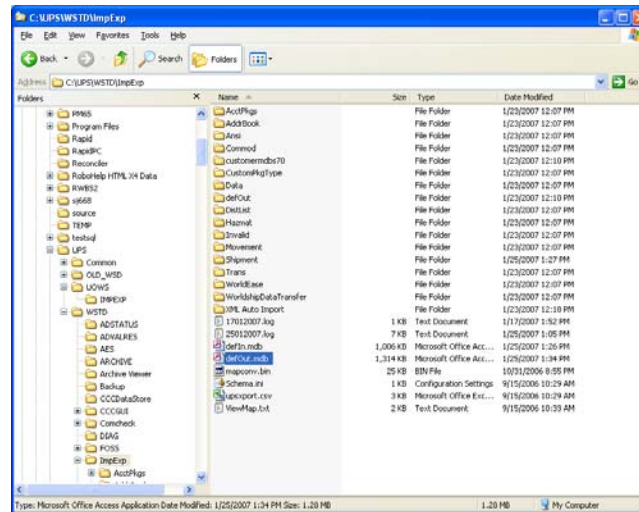

Go back to **Import/Export Data | Batch Export** and ensure that the **E2UPSOUTMAP9** file is still displaying here. If it is not, you can find it in your E2 Source directory (**E2 v 7.2.8 or higher**) and copy it into the appropriate UPS directory: C:\UPS\WSTD\ImpExp\Shipment

If you are running a version of E2 lower than 7.2.8 and cannot update, contact Shoptech Support to obtain the **E2UPSOUTMAP9** file.

## Verifying the Directory Structure

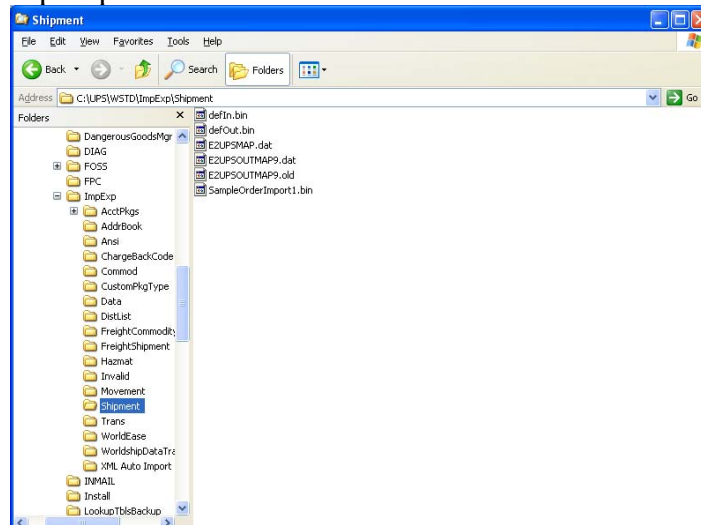

The directory structure for UPS has been altered slightly and is shown below. All of your old information will be moved appropriately. Notice that the new **UPS\WSTD** directory now holds the **ImpExp** directory where your **defIn.mdb** and **defOut.mdb** files are stored.

You will need to make sure that the interface is connected to the **defOut.mdb** in this new path so you may need to alter your Registry Settings so that you can reset this path. Please follow the instructions below, if necessary:

1. Go to Start | Run and type **regedit** or **regedt32** in the Open: field and click OK.
2. On the Registry Editor screen, go to **HKEY\_LOCAL\_MACHINE** and double click the **SOFTWARE** folder to expand it.
3. Scroll down to **SHOPTECH** and double click it to expand it. Then click on the **E2SS** folder. This will display all the registries you have. These are in alphabetical order so look toward the bottom for:  
**UOWSPath: REG\_SZ : C:\UPS\UOWS\ImpExp\|0|1|1**
4. Select it to highlight it. PLEASE make sure it is the ONLY entry selected on this screen. Then click your Delete key. This removes the old connection. Now go ahead and close the Registry Editor. When you click the UPS WorldShip button now, as shown on the next page, you will be prompted to set the connection to the **defOut.mdb** again. Make sure you set the path to **C:\UPS\WSTD\ImpExp\defOut.mdb**.

Under the **C:\UPS\WSTD\ImpExp** directory is the same **Shipment** directory where our custom maps should be saved for the Import and Export process.

## Using UPS WorldShip

Now you can automatically calculate UPS shipping costs and assign tracking numbers. Just create your Packing List and process it. This interface supports UPS WorldShip Software V 12.0. Your Packing Lists **MUST** carry the Shipping Code “UPS” in order for the export to “see” them and list them on the Export tab of the interface. If you have special instructions for your shipping department (e.g., UPS Blue), enter this information in the Ship Via field on the Header tab of the Order. This will populate the Ship Via field on your Packing List. If you have multiple boxes in a shipment, use the Pack Separately option on the Detail tab of the Shop System Packing List and determine the number of like parts to be packed in each container. These “multiple” packages **MUST** be sent over to UPS divided this way so they can be properly numbered via the Reference Numbering system in WorldShip and assigned individual Tracking Numbers (refer to the Export Options in Step 5 on page 7). The field Description of Contents on the Bill of Lading tab cannot be more than 50 characters.

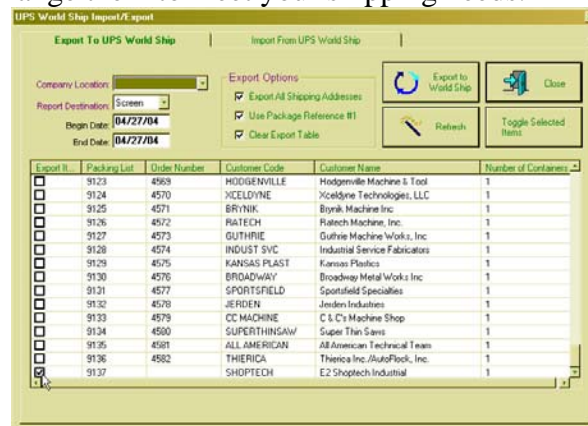

## Exporting Packing Lists Out of E2SS

Go to **Orders | Shipments** and create **Packing Lists** to export out of E2. Use the **UPS WorldShip** button on the main Shipments screen to export. The first time you attempt to **Export** out of E2 after upgrading to v12.0, you will likely see your **Packing List(s)** in the grid, but UPS will lose it’s path to the **defOut.mdb** and will prompt you with that message. Close your **WorldShip** interface screen and re-open it with the **UPS WorldShip** button. You will be prompted to set the path. If you have never used WorldShip before (or you altered your Registry Settings as described under Verifying the Directory Structure; steps 1-4), you will see this prompt to set the connection right away. Click **Yes** to continue.

On the **Open** dialog box make sure you navigate to the **C:\UPS\WSTD\ImpExp** directory and select the **defOut.mdb** you see there. It should be the only file you can select to make this connection. If you do not see the **defOut.mdb** in this directory, your software has not loaded correctly and you should re-load your UPS software.

Once you select the **defOut.mdb** and click **Open**, the **UPS World Ship Import/Export** screen will automatically open and your **Packing Lists** will display in the grid on the **Export** tab. You will notice two tabs: an **Export To UPS WorldShip** and **Import From UPS WorldShip**. The **Export** tab lists all **Packing Lists** that have not been exported to UPS for the date range specified. Remember, only those **Packing Lists** with “UPS” as the **Shipping Code** will be available here. They will all be selected. By default, the Begin and End Dates are “today,” but you can change them to meet your shipping needs.

You can easily select and deselect them all with the Toggle Selected Items button.

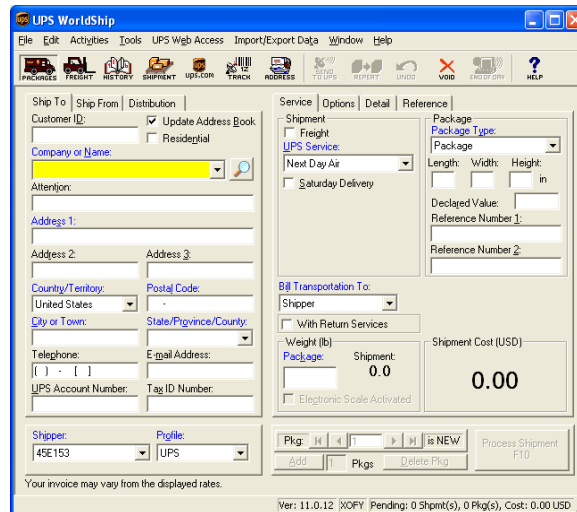

1. Since all the packing lists are selected automatically when you enter this screen, click the Toggle button once to deselect them all. Then select the packing list(s) you want to export.

Export #	Packing List	Order Number	Customer Code	Customer Name	Number of Containers
<input checked="" type="checkbox"/>	9123	4569	HODGENVILLE	Hodgenville Machine & Tool	1
<input type="checkbox"/>	9124	4570	XCELDYNE	Xcelkine Technologies, LLC	1
<input type="checkbox"/>	9125	4571	BRYNCK	Brynck Machine Inc.	1
<input type="checkbox"/>	9126	4572	RATECH	Ratech Machine, Inc.	1
<input type="checkbox"/>	9127	4573	GUTHRIE	Guthrie Machine Works, Inc.	1
<input type="checkbox"/>	9128	4574	INDUST SVC	Industrial Service Fabricators	1
<input type="checkbox"/>	9129	4575	KANSAS PLAST	Kansas Plastics	1
<input type="checkbox"/>	9130	4576	BROADWAY	Broadway Metal Works Inc.	1
<input type="checkbox"/>	9131	4577	SPORTSFIELD	Sportfield Specialties	1
<input type="checkbox"/>	9132	4578	JERDEN	Jerden Industries	1
<input type="checkbox"/>	9133	4579	CC MACHINE	C & C's Machine Shop	1
<input type="checkbox"/>	9134	4580	SUPERTHINGSAW	Super Thin Saws	1
<input type="checkbox"/>	9135	4581	ALL AMERICAN	All American Technical Team	1
<input type="checkbox"/>	9136	4582	THEIRICA	Theirica Inc./AutoPack, Inc.	1
<input type="checkbox"/>	9137		SHOPTECH	E2 ShopTech Industrial	1

2. Select your Company Location. The default will be the address you have selected as the default in Company Maintenance. Use the drop down arrow to select the Location Code for the company address **shipping** the package.
3. Select your Report Destination.
4. Set your Date Range. The default will be “today,” but you can change that if you ship packages less than daily. Use the Refresh button to load new results if you make a change.
5. Then set your Export Options:
  - Export All Shipping Addresses (populates all your customer addresses that have UPS set as their shipping code on their default shipping address into the Address Book table in the defIn.mdb database so you can load them in WorldShip)
  - Use Package Reference # (tells the software to let UPS assign package numbering; especially important for multiple packages in one shipment)
  - Clear Export Table (clears packing lists that are already exported from the defIn.mdb file)
6. Finally click the Export to World Ship button, which populates the defIn.mdb file under C:\UPS\WSTD\ImpExp. This database will be overwritten each time you perform the Export because you checked the Clear Export Table option in step 5 above.
7. A report of all the Packing Lists exported will generate. You can print it or simply close it and then close the Import/Export screen. **Once closed, this report cannot be regenerated.**

## UPS WorldShip

Once you have sent your packing list(s) to UPS, you will have to open the UPS Online WorldShip software. You'll have two options for reconciling/processing your shipments once you have exported out of E2: the standard "batch" import or a "keyed" import where you enter the E2 Packing List numbers manually.

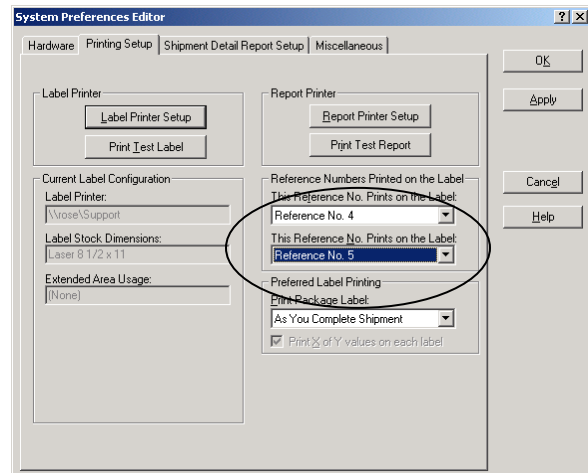

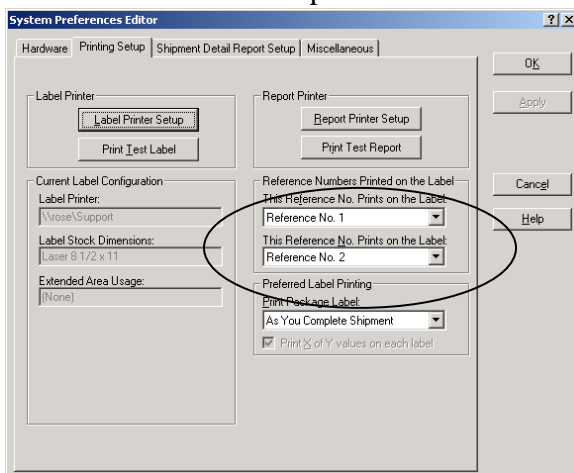

## UPS Settings

Before you get started, there are a few things you should set in UPS WorldShip prior to processing shipments.

## Reference Numbers

On page 7 of these instructions, the checkmark must be **ON** for the Use Package Reference # option under Export Options. The interface needs this reference field in order to map fields from UPS to E2. Some customers need to use Reference fields for Packing List Numbers, Customer Purchase Order Numbers, etc. so they will print on the label for the package. **Since E2 needs Reference1 and Reference2, you may use 3, 4, or 5 to print this information on your label.** Here's how you change the default fields that print on the label!

1. Go to Tools | System Preferences Editor and click on the Printing Setup tab. Notice the Reference Numbers Printed on the Label section. Reference No. 1 and Reference No. 2 are the default. Simply click the drop down arrows to select Reference No. 3, Reference No. 4, or Reference No. 5. Only two of the Reference fields will print on the label.

- Now, just click the Apply button and then OK. When you return to the main WorldShip screen, click on the Reference Tab on the right side and you will see your new preferences for these fields. Now you can enter information into them without disrupting the mapping between Worldship and E2.

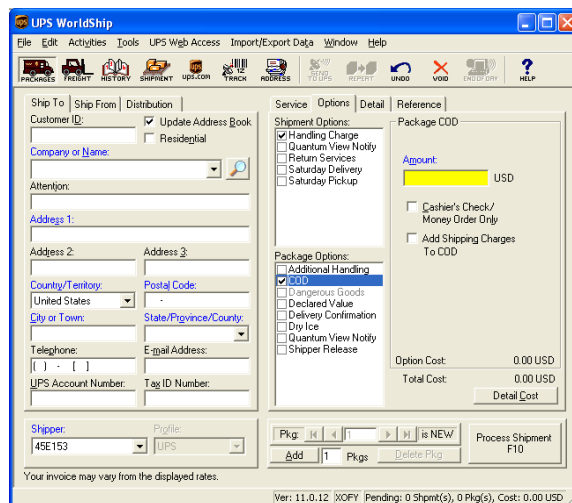

## Handling Charges

Handling Charges you apply in E2 or UPS do not translate back and forth between the two systems so you will have to apply a Handling Charge in UPS and then manually type that same amount in the Handling Charge field on the Bill of Lading tab on the E2 Packing List. When you tab off that field, it will calculate into the Shipping Charges field on the BOL tab and the Details tab. If you are doing a COD shipment and need to add Handling Charges, you **MUST** leave the Handling Charge field blank on the BOL tab of the E2 Packing List and then you **MUST** add it in while reconciling the shipment in E2. When you import back into E2, you will have to go to the BOL tab of your Packing List and manually type that same amount you entered in UPS for the Handling and your Shipping Charges will then match so that you can reconcile the payment from the driver with the AR | Billing you generate. If you intend to use the UPS interface, **PLEASE** remove any default Handling Charges from your Shipping Code via Table Maintenance and manually add these charges in when appropriate.

## CODs

At times you will want to send a package COD. This is easy in WorldShip and imports back into E2 just as easily. Just set all of your costs in WorldShip and they will be applied to your packing list in E2 so you can generate AR | Billing. When you Edit/Reconcile a shipment, you will have the opportunity to apply COD Fees and enter the amount to be collected by the UPS driver.

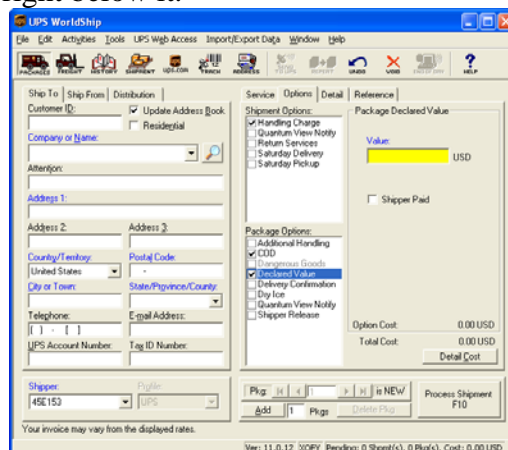

With your customer's information showing in the Ship To tab, click the Options tab and then click the COD check box under the Package Options section. Package COD fields display to the right. Your cursor will be prompting you for the Amount. This is the amount you are charging for the inventory you are shipping. This does not include any COD Fees or other shipping charges. Enter the dollar amount here. If you need a Cashier's Check or Money Order, click that option and then click the option to combine the Shipping Charges with the COD. The Option Cost of \$7.50 defaults in the lower right corner and is automatically added into the Total Cost, which is just the Shipping Charges, right below it.

The screenshot shows the UPS WorldShip application window. The 'Options' tab is selected. Under 'Package Options', the 'Additional Handling' checkbox is checked. The 'Package COD' section on the right has the 'Amount' field highlighted in yellow. Below it, there are checkboxes for 'Cashier's Check/Money Order Only' and 'Add Shipping Charges To COD'. The 'Option Cost' and 'Total Cost' are both displayed as 0.00 USD.

## Insurance

If your package needs to be insured for more than the standard \$100, you will also have to set this on the Options tab in WorldShip. Just click the Declared Value check box under Package Options and enter the dollar value you want to be insured. Your cursor will be prompting you for that. Once you enter a dollar amount, WorldShip automatically calculates what the charge will be and displays it in the Option Cost in the lower right corner and adds it to the Total Cost right below it.

This screenshot shows the same UPS WorldShip interface, but with the 'Declared Value' checkbox under 'Package Options' selected. The 'Package Declared Value' section on the right now has a 'Value' field highlighted in yellow. The 'Option Cost' and 'Total Cost' remain at 0.00 USD.

## Bill to Third Party/Freight Collect

When you have the option to bill your customers directly for their UPS charges, you can set this easily in WorldShip. Once you have the Packing List information imported, you can select Receiver under the Bill Transportation To section and enter the Customer's UPS Account Number at the bottom of the Ship To tab or you can select the Third Party option on the Service tab in WorldShip. The Third Party Address dialog box displays where you can fill in the 3<sup>rd</sup> party's information and Shipper number. All the options selected on the Service, Options, Detail, and Reference tabs will be calculated just like you were doing a normal shipment except the Total Cost will be charged to your customer's UPS Account or the 3<sup>rd</sup> party. When you complete the Batch Export and write to the defOut.mdb, appropriate fields will populate with permanent statements the export recognizes telling E2 to disregard the charges populated in the siTotalShipmentCharge field. So after the import back to E2, the Packing List will have zero for Shipping Charges.

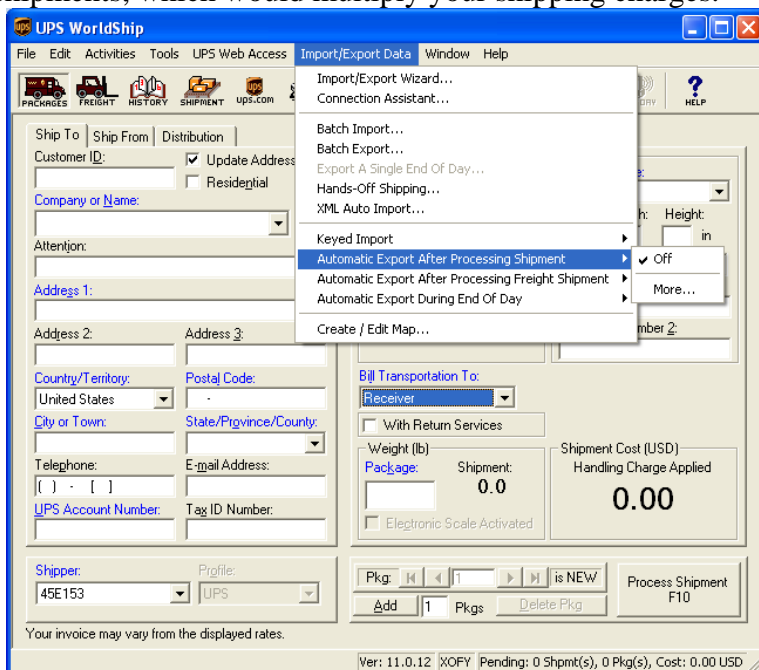

**PLEASE NOTE:** When shipping internationally, you can use Receiver to bill shipping charges to another account, but you cannot use Third Party options due to customs regulations and all the miscellaneous options that can be selected along with that option.

The Third Party Address dialog box is a standard Windows-style window with a title bar. It contains several input fields: Customer ID (with a checkmark for 'Update Address Book'), Company or Name (a dropdown menu), Attention (text field), Street (text field), Room/Floor/Address 2 (text field), Department/Address 3 (text field), Country (dropdown menu, currently showing 'United States'), Postal/ZIP Code (text field), City (text field), State/Province (dropdown menu), Telephone (text field), Fax (text field), and UPS Account Number (text field). There are buttons for OK, Cancel, and Help.

## Automatic Export Options

Under the **Import/Export Data** menu, notice the Automatic Export After Processing Shipment and Automatic Export During End of Day. These options should be **TURNED OFF** to ensure that you do not export multiple copies of your processed shipments, which would multiply your shipping charges.

The image shows the main window of the UPS WorldShip application. The 'Import/Export Data' menu is open, showing options like 'Batch Import...', 'Batch Export...', 'Export A Single End Of Day...', 'Hands-Off Shipping...', 'XML Auto Import...', 'Keyed Import', 'Automatic Export After Processing Shipment' (which is currently set to 'Off'), 'Automatic Export After Processing Freight Shipment', 'Automatic Export During End Of Day', and 'Create / Edit Map...'. The main window has a menu bar (File, Edit, Activities, Tools, UPS Web Access, Import/Export Data, Window, Help) and a toolbar with icons for Packages, Freight, History, Shipment, and UPS.com. The 'Ship To' tab is active, showing fields for Customer ID, Company or Name, Attention, Address 1, Address 2, Address 3, Country/Territory, Postal Code, City or Town, State/Province/Country, Telephone, E-mail Address, UPS Account Number, and Tag ID Number. The 'Bill Transportation To' dropdown is set to 'Receiver'. The 'Weight (lb)' field is 0.0, and the 'Shipment Cost (USD)' is 0.00. The 'Shipper' dropdown is set to '45E153' and the 'Profile' dropdown is set to 'UPS'. The status bar at the bottom shows 'Ver: 11.0.12 XOFY Pending: 0 Shpmt(s), 0 Pkg(s), Cost: 0.00 USD'.

## Using the Reference Rate Utility

### *How do I add the Fuel Surcharge to my published rates?*

1. You can adjust your rates for the Fuel Surcharge by using the Reference Rate Utility, which is included with WorldShip. For more information on how to adjust your rates using the Reference Rate Utility, use this link to Fuel Surcharge info on ups.com:

[http://www.ups.com/content/us/en/resources/find/cost/fuel\\_surcharge.html](http://www.ups.com/content/us/en/resources/find/cost/fuel_surcharge.html)

2. Beginning with WorldShip 9.0, the Reference Rate Utility is available only if you used the utility to modify rates in a previous version of WorldShip.

[http://www.ups.com/content/us/en/resources/find/cost/fuel\\_surcharge.html](http://www.ups.com/content/us/en/resources/find/cost/fuel_surcharge.html)

### *How do I know if I have downloaded and installed the newest Rates?*

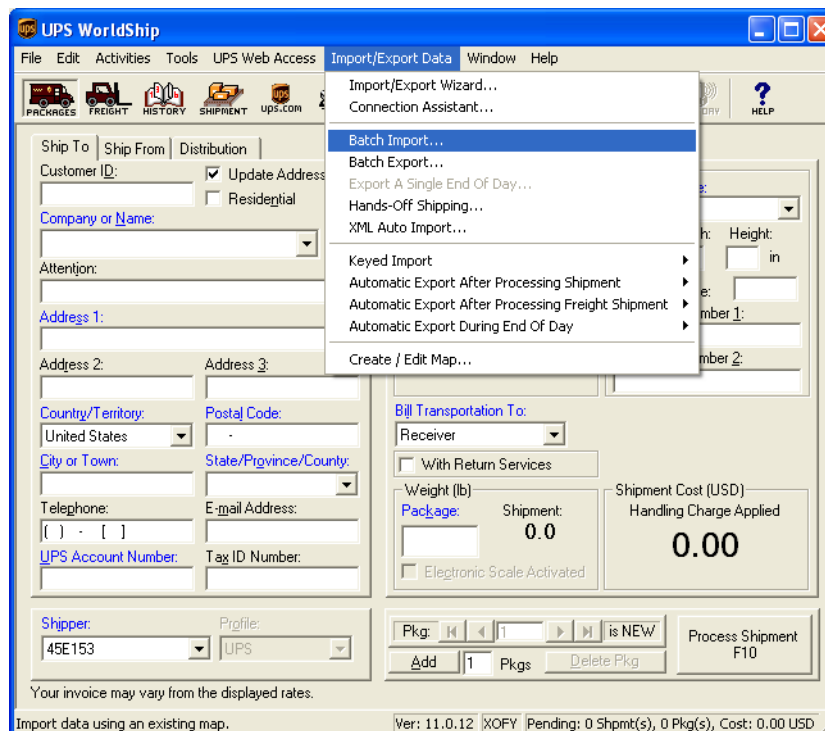

Select "Help", then choose "About UPS OnLine WorldShip". The UPS Service Rates Version will display MM/YY (Month/Year). For the 2007 rates you will view '01/07'.

If the rates have not been applied, verify that the system date is correct. Shut down and restart the WorldShip application. Check in Help again.

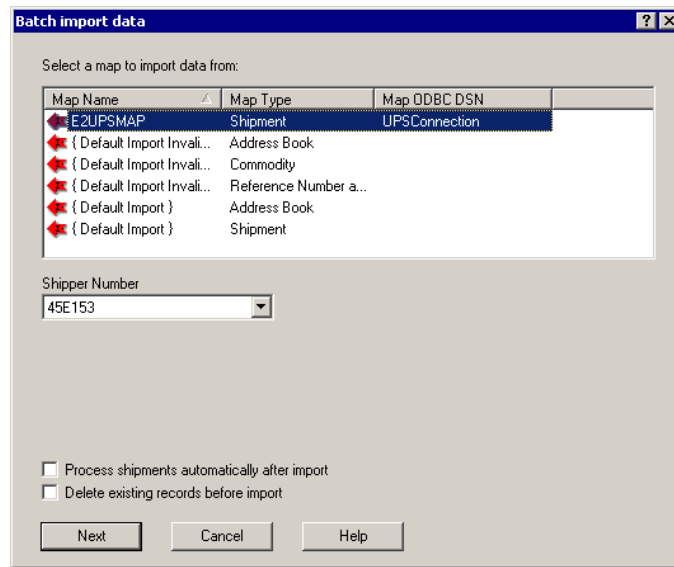

## UPS Processes

Now that you have WorldShip set, you're ready to assign tracking numbers and calculate shipping charges! You have two options here to get your Packing Lists into UPS – the standard Batch Import or the Keyed Import!

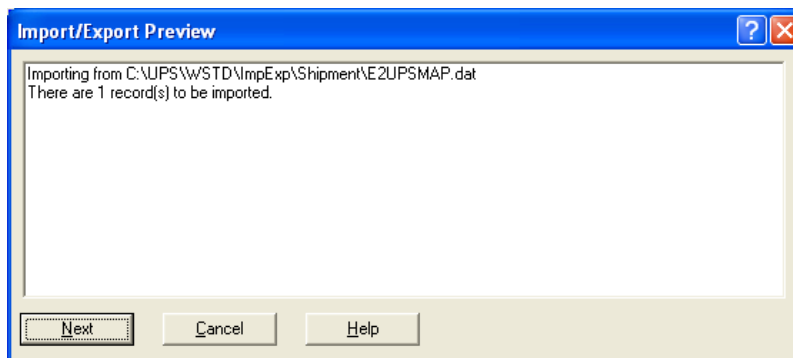

1. To get the batch import, go to **Import/Export Data | Batch Import**.

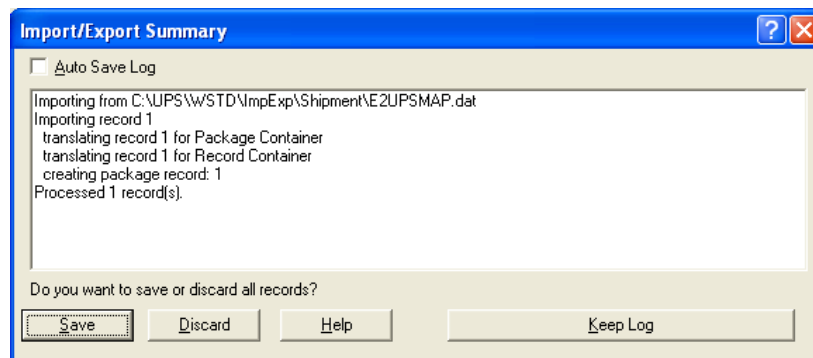

2. On the Batch Import Data screen, select the “E2UPSMAP” and click Next. This is one of the customer maps you must load into your C:\UPS\WSTD\ImpExp\Shipment directory.

3. On the Import/Export Preview dialog box, click Next.

4. On the Import/Export Summary dialog box, click Save. You must click Save here or the processed records will not be available in the Pickup Log used in the next step.

5. To use the Keyed Import, you will have to set a path to the map the first time you use it. This will only have to be done one time! Go to Import/Export Data | Keyed Import | More. On the Select map from list to import dialog box, click on E2UPSMAP and then click the Import button in the lower left corner.

6. This automatically opens the Enter import key: dialog box where you can simply type the Packing List number and press Enter to load the shipment information in the Ship To tab. Skip to Step 10 to complete the reconciling process.

- Once you set this import file it will display always under UPS OnLine Connect | Keyed Import so you can start it quickly when you open the WorldShip application. The import key dialog box will stay open until you have completed all your shipments.

7. If you are using the Batch Import, you will need to click the Shipment History button to look at a list of your imported shipments.

The screenshot shows the 'UPS WorldShip' application window with the 'New Shipment' form. The form is divided into several sections: 'Ship To' (Customer ID, Company or Name, Attention, Address 1-3, Country/Territory, Postal Code, City or Town, State/Province/County, Telephone, E-mail Address, UPS Account Number, Tag ID Number), 'Ship From' (Shipper, Profile), 'Service' (Shipment type, UPS Service, Next Day Air, Saturday Delivery), 'Options' (Bill Transportation To, With Return Services, Weight (lb), Package, Shipment, Electronic Scale Activated), 'Detail' (Package Type, Length, Width, Height, Declared Value, Reference Number 1-2), and 'Reference' (Shipment Cost (USD)). The 'Shipment' section shows 'Next Day Air' selected. The 'Package' section shows 'Package' selected. The 'Shipment Cost (USD)' is displayed as '0.00'. The status bar at the bottom indicates 'Ver: 11.0.12 XOFY Pending: 0 Shpmt(s), 0 Pkg(s), Cost: 0.00 USD'.

8. Click the plus (+) buttons to expand the list of Shipments.

The screenshot shows the 'UPS WorldShip' application window with the 'Shipment History' view. The left pane shows a tree view of 'UPS Pickups' and 'Imported Shipments'. The 'Imported Shipments' section is expanded, showing a list of shipments. The right pane shows the details for the selected shipment, including 'Shipper: 45E153', 'Ship To: Carter Corporation', 'Ship From: Dock 83', 'Telephone: 1577 Industrial Blvd.', 'Email: Harrisburg, PA 38737', 'United States'. The 'Package' section shows 'Tracking No.: None Entered', 'Large Package: No', 'Dimensions: None Entered', 'Package Wt: 2.0 lb', 'Pkg Type: Package'. The status bar at the bottom indicates 'Ver: 11.0.12 Package 1 of 1'.

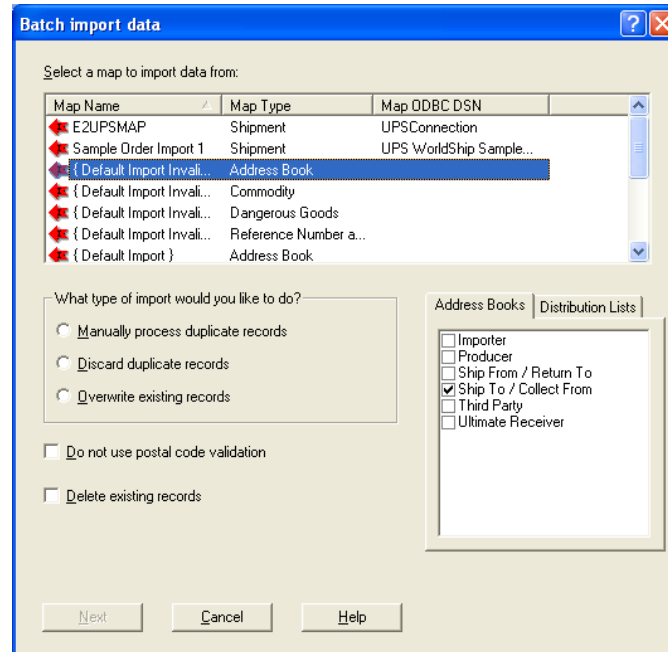

9. Select the shipment you want. **DO NOT change the REF1 and REF2 notations in the Misc: text box in the lower right corner. E2 needs these reference fields to remain as is in order for the interface to import your information back into Shop System packing lists.** Please refer back to the instructions for changing the default reference fields that print on the label under *UPS Settings, Reference Numbers* if you have information you must convey to your customers on the package label. You have to do each shipment individually and multiple boxes to one customer will look like individual Shipments, but they will be numbered in the Misc: text box appropriately.

10. With your shipment information in the Ship To tab, click the Edit button.
11. When you are prompted to edit the shipment, click Yes. The UPS Online World Ship screen populates with the Shipment information.
12. Select your UPS Service type, verify the package weight, and enter the package dimensions. Complete any additional information on the Options, Detail, or Reference tabs. Then go back to the Service tab.

13. Click the Process Shipment button. This will include the shipping charges, assign the tracking number, and generate a label to your default printer.

## Importing Customer Addresses

1. Now, go back to Import/Export Data and select Batch Import again. We will import your customer addresses so they are all loaded in WorldShip. These are available to us because we checked the Export All Shipping Addresses under Export Options when we did the initial export out of E2. Select the Default Import of Address Book as the Map Type. Then select the type of import you would like. The Ship To option is the default on the Address Book tab. Select any other options you need and then click Next.

2. The Import/Export Preview will display the number of records you have imported. Click Next to continue. **Notice that the Importing from is the same file path we initially began with during installation.**

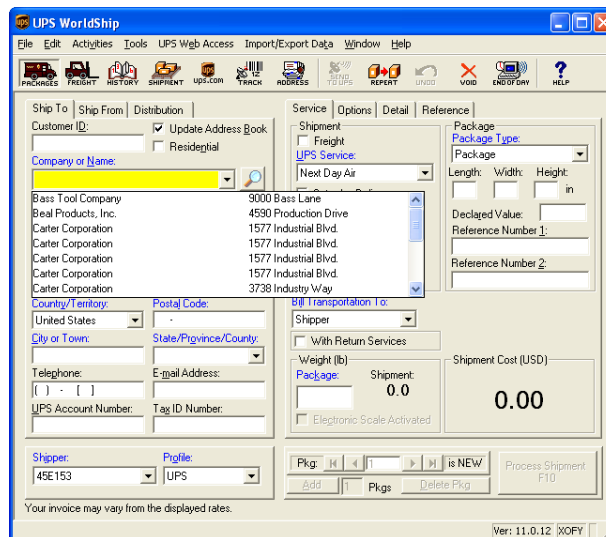

3. The Import/Export Summary dialog box will display. Pay attention to the notations in it as they will inform you of any addresses that failed. Make a note of them and then click Save.

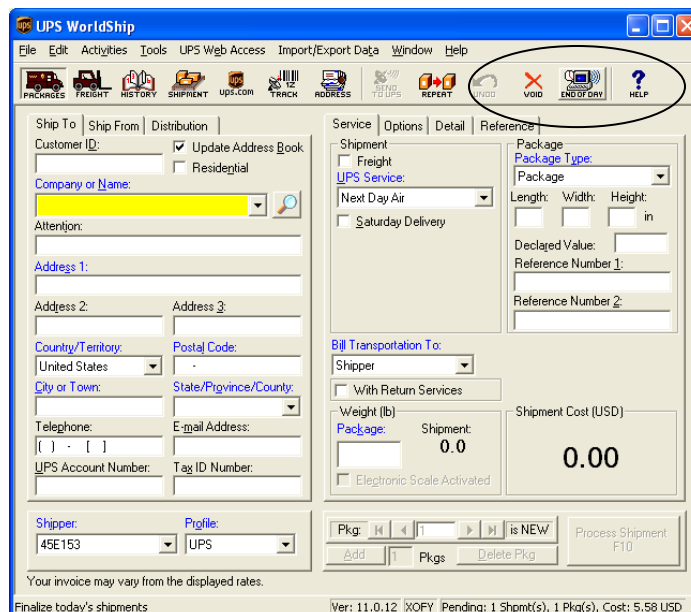

4. Now you will have all your valid addresses available on the Ship To tab in the Company or Name field.

## End Of Day Processes

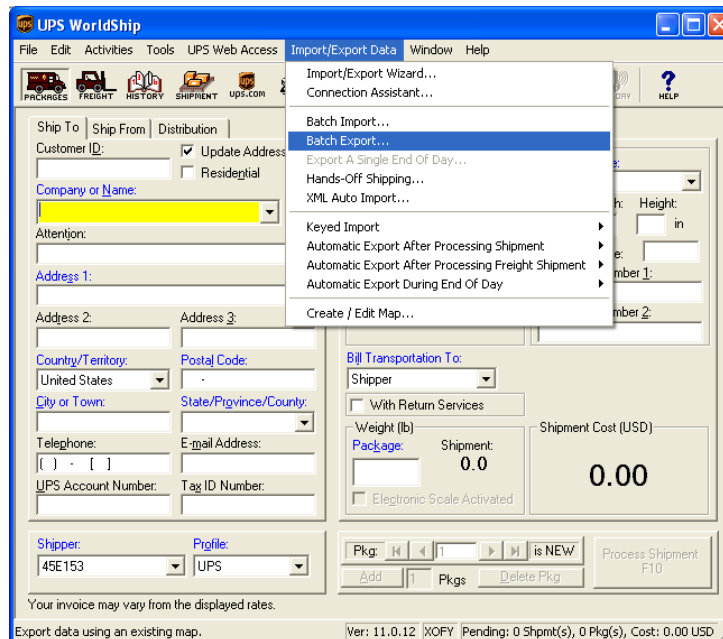

1. Once all of your shipments have been reconciled, complete the End of Day process. Click the End of Day button.

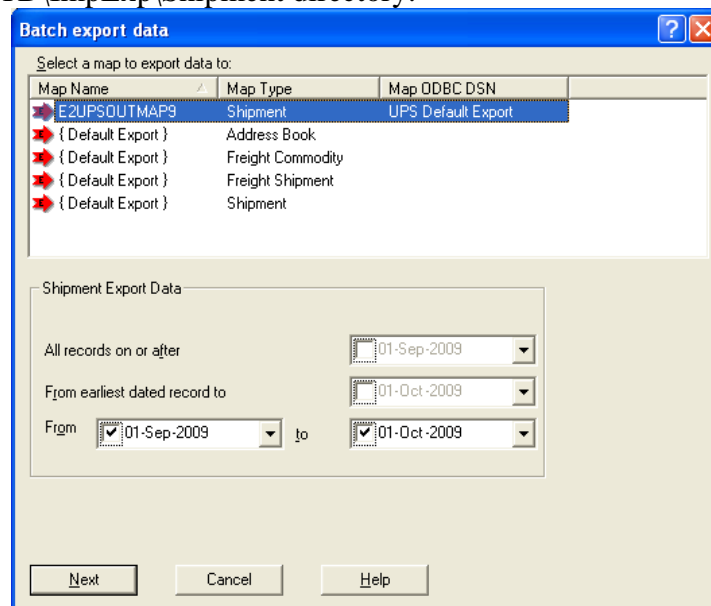

- When you are prompted to close today's shipping, click Yes. The Pickup Summary Barcode Report and Daily Shipment Detail Report will generate automatically to your default printer.

- Go to Import/Export Data | Batch Export.

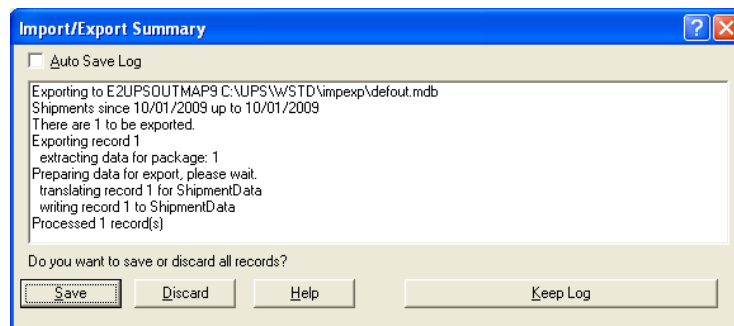

- On the Batch Export Data dialog box, notice the Shipment Export Data information. The default is to export data for one month. This would not be necessary if you ship daily and you would want to change that date range to be "today" instead of the full month to avoid re-exporting past information into the defOut.mdb file. Select the E2UPSOUTMAP9 and click Next. This is the other custom map you pasted in your C:\UPS\WSTD\ImpExp\Shipment directory.

5. On the Import/Export Preview dialog box, click Next. (**again, note the file path**)

6. On the Import/Export Summary dialog box, click Save. You must click Save to populate the defOut.mdb file under C:\UPS\WSTD\ImpExp so that it can be imported back into E2 and complete the Shipping Charges, Service, and Tracking Number on your Packing Lists.

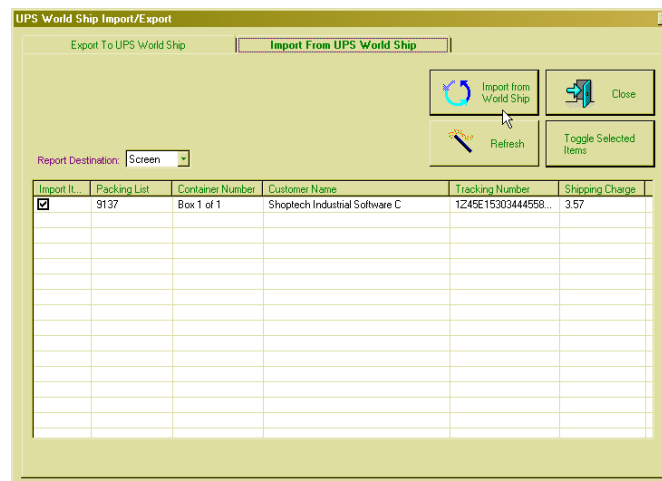

7. Return to E2SS and go to the UPS World Ship Import/Export screen.

## Import Process Back in E2

UPS has calculated your charges and assigned the tracking number.

1. Click on the Import tab. You should see your packing list(s) in the grid. Again you can use the toggle to select and deselect those to import.
2. Once the PLs you want to import are selected, click the Import from World Ship button, which clears the defOut.mdb under C:\UPS\WSTD\ImpExp. Your Imported Packages report prints. **Once printed, this report cannot be regenerated.**

3. Close the UPS World Ship Import/Export screen.

- Now Edit your Packing List. Notice that the Shipping Charges as well as the UPS Service on the Ship Via: line on the Detail tab are now populated. Additionally, an Exported To UPS checkbox now displays with a checkmark.

Buttons: Delete, Ungroprocess, Zero out grid, Details

- Click on the Bill of Lading tab. Notice the Shipping Charges are populated there too along with the Tracking Number(s). Here you can select the Tracking Number and right click it to open the Container Detail screen. From here you can click the Details button to automatically open the UPS website to track your package.

Special Instructions:

## UPS Error Log Files

Any error importing/exporting from UPS Worldship/E2 will be saved and stored in the ImpExp folder located on your local C:\drive (C:\UPS\WSTD\ImpExp) in NotePad format. The name correlates to the date it was created.

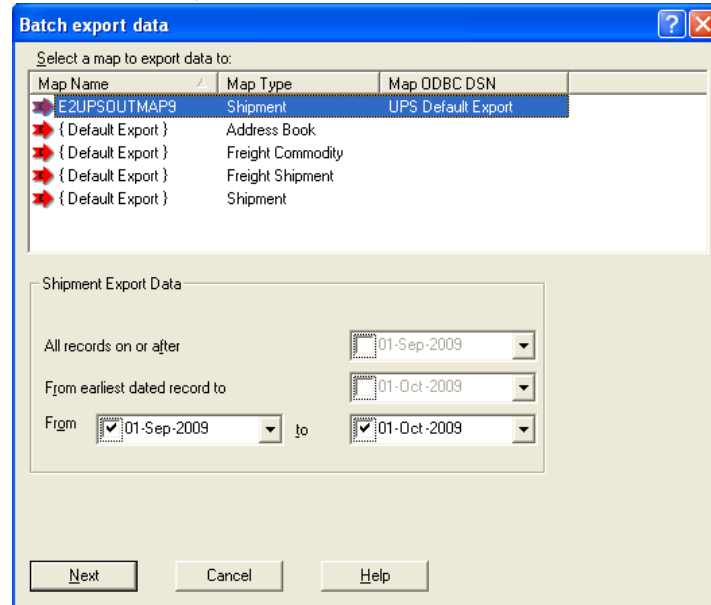

In this error log, two E2 customer code locations have had their cities truncated in UPS:

Once you have the error information you need, this can be archived or deleted, but you should make any corrections necessary to address information in UPS and/or E2.

## Troubleshooting Export File Back into E2

When exporting packing lists back into E2, select the **E2UPSOUTMAP9** file.

When selecting this file, if the Import/Export Preview and the Import/Export Summary windows do not appear and no records import into E2, attempt to Export using the standard {Default Export} Shipment file.

If the export works using this file, then there is a problem with the **E2UPSOUTMAP9** file and needs to be replaced.

If the export still does not work, then an uninstall and re-install is in order.
